From the Editor-in-Chief's Desk

Dear Readers

Let me take this opportunity to wish you all a very happy and prosperous New Year through this medium of the first Issue of our Newsletter "The Civil Engineer".

The present issue of our Newsletter carries the usual features besides three articles on (i) "Water Scenario In 2070 "based on a Presentation by Late Dr. A.P.J. Abdul Kalam", (ii) "We Can Build Roads Three-Times Faster" and (iii) "Earthquake Engineering".

In the first article our late President Dr. A.P.J. Abdul Kalam visualizes the Water Scenario in 2070. He feels that he cannot help feeling guilty because he belongs to the generation who contributed to the destruction of the environment which did not take into account all the warning signs. He believes that within a short time life on earth will not be possible as the destruction of nature has reached now at an irreversible stage.

The second article deals with an important matter as to how we can build roads three times faster with our noiseless machines without any hassing sound or dust particles troubling the citizens.

The third article deals with Earthquake Engineering. The focus of Earthquake Engineering begins with the study of occurrence of the earthquake and ground activity associated with it. The article makes in-depth study of the causes of the earthquake which results in all causalities.

I am sure you will have an interesting reading of these articles which may not be related to your course directly but they definitely provide an important input to you as an upcoming engineer.

With my best wishes to you all.

Dr. S.L. Swamy
Chairman

In order the people may be happy in their work, these three things are needed:

- *They must be fit for it.*
- *They must not do too much of it.*
- *And they must have a sense of success in it.*

From the Editor's pen

Dear Readers

With the beginning of the year 2017, Newsletter of ICE(I) also starts beginning and here we are with first quarterly issue of 2017 Newsletter which has all the usual features for the readers to go through.

The year gone by i.e. 2016 has taken away all that was slated for it and 2017 has begun with all new hopes. They say that past is a waste-paper and present is a newspaper while future is a question paper and, therefore, we should come out of our past, control the present and secure the future. Our eyes are placed in front because it is more important to look ahead than to look back. This gives us new energy and new hopes to achieve our goals.

We may not have achieved what we wanted. May be that was not meant for us then. May be we will get it at an appropriate time. This

should not diminish our zeal to march ahead for a bright future which lies in our hands by doing our job, whatever it may be, sincerely and honestly and leave the results to Him to give at a time destined for them by the Almighty without any grudge and with all our gratitude.

Again we are standing at the threshold of Summer-2017 Examinations in early June. Plan your studies well so that there is no tension in the end and you do well in the Examinations.

With my best wishes.

Prithipal Singh
Secretary General

Never continue in a job you don't enjoy. If you're happy in what you're doing you'll like yourself, you'll have inner peace. And, If you have that, along with physical health, you will have had more success than you could possibly have imagined.

WATER SCENARIO IN 2070 BASED ON A PRESENTATION* BY DR. A.P.J.ABDUL KALAM

This is the year 2070.

I have just turned the age 50, but my appearance is of somebody of 85 age. I am suffering from serious kidney problems, because I do not drink enough water, in fact I do not have it. I'm afraid that I do not have much time left to live. I am one of the oldest person in this society.

I remember, when I was a child of age then everything was very different. There were lot of trees in the parks, houses with beautiful gardens, and I could enjoy having a shower bath for half an hour, at least. Nowadays we use towels with mineral oil to clean our skin, instead of bath.

When I became adult at the age of 18, women had beautiful long hairs. Now, we have to shave our heads to keep them clean without the use of water. Then, my father washed his car with water coming out of a hosepipe. Now, my son does not believe that water could be used and wasted that way.

I remember there were SAVE WATER warnings on outside posters, radio and TV, but nobody paid attention. We thought that water was to last forever and we never ever paid the attention to water saving. Now, all the rivers, lakes, dams and underground water beds are either dry or contaminated.

Industry came virtually to a standstill and unemployment reached dramatic proportions. Desalination plants are the main source of employment and workers receive part of their salary in the form of drinkable water. Assaults at gun point on the streets for a jerrycan of water are very common.

Industry came virtually to a standstill and unemployment reached dramatic proportions. Desalination plants are the main source of employment and workers receive part of their salary in the form of drinkable water. Assaults at gun point on the streets for a jerrycan of water are very common.

When I was adult, the recommended quantity of water to drink for an adult was 8 glasses a day. Nowadays, I am only allowed half a glass. We now have to wear disposable clothing, and this increases the amount of litter and spoil the environment. We are started reusing septic tanks now, because the sewerage system does not work for lack of water.

The outside appearance of the population is horrible: wrinkled, emaciated bodies, due to dehydration, full of sores caused by ultra violet radiation, now stronger without the protective shield of the ozone layer. Skin cancer,

gastrointestinal infections and of the urinary tracts are the main causes of death.

Due to the excessive drying of the skin young people of age 20 look like 40years old. Scientists investigate, but there's no solution to the problem. Water cannot be produced, oxygen is also degraded due to the lack of trees and vegetation, and the intellectual capacity of the new generations is severely impaired.

The morphology of spermatozoa in many men has changed. As a consequence, babies are born with deficiencies, mutations and physical deformities.

Government has introduced AIR TAX for the air we breathe, 137 m³ per day per adult person. People who are unable to pay are jailed and some of them are expelled from the "ventilated zones", with huge mechanical lungs driven by solar power. The average life expectancy is 35 years. The air is not of good quality, but at least people can breathe.

In some countries, where there are still some green zones crossed by rivers, these are guarded by heavy armed soldiers. Water became a very coveted treasure, more precious than gold and diamonds. Water is sold in pouches of 10 grams like gold coins.

Where I live, there are no trees, because it seldom rains. When it happens to register some precipitation, it is of acid rain. The seasons have been severely affected by the atomic tests and by contamination from the 20th century polluting industries. We were warned to look after the environment, but nobody cared.

When my son asks me to talk about my youth, I tell him about the green fields, the beauty of the flowers, the rain, how pleasant was to swim and fish in the rivers and dams, to drink all the water we could, and how healthy people was. He asks: Daddy! Why there is no water? Then, I feel a lump in my throat!

I cannot help feeling guilty, because I belong to the generation who contributed to the destruction of the environment or simply did not take into account all the warning signs.

Now our children pay a very high price!

I sincerely believe that within a short time life on earth will not be possible, as the destruction of nature reached now an irreversible stage.

How I would like to go back and make mankind understand.....that we still had time to save our Planet Earth.

**Presentation published in the magazine "Crónicas de los Tiempos", in April 2002*

*Compiled by:
Capt (Dr.) Nitin P Sonaje
Shivaji University, Kolhapur, Maharashtra
Life Member ICE(I) No. 30372*

WE CAN BUILD ROADS THREE-TIMES FASTER

A recent study by McKinsey Global Institute says that India, will require building 2.5 billion square metres of paved road to match the huge influx of migrating population in the urban pockets by the year 2030. However the pace of highway construction is at an average of 18.23 km per day, a way lower than what is required. Ben James, CEO of Global Road Technology, an Australia based company, talks about how new equipment and advance technology can increase the speed of road making in India by almost three times, and can save substantial cost of construction.

Tell us about the technology you are using to make roads? How is it different than the available road building technologies in India?

Our company is specialised in polymer soil stabilisation for new generation road construction. We use advanced Concrete Treated Base (CTB), Cold-In-Place-Recycling (CIPR) and Foamed Bitumen technology. We use the existing soil base and suppress it over a very high pressure and heat with cement mixed binding agent. It instantly makes the base solid and firm. GRT's liquid polymer dust suppression technology mops out dust particles around the road. There is no need to put additional water to settle the dust so it saves both energy, water and is able to create instant highway infrastructure.

Our USP is our speed, which is an established fact. Even if we take conservative estimate, our hot and cold technology can construct roads at least three times faster than the conventional method.

Another advantage is that this technology saves 10 per cent of the total project cost, which is substantial for a big ticket highway project. This technology thus is able to save time, money, natural resources like water and also the environment by not releasing dust particles.

And biggest factor is the quality of roads. We use very sophisticated machines with 20 tonne rollers and using cement mix while compacting, which binds the road layer and make it stronger, which doesn't require any maintenance. What is important, there is no scope of cuttings corners in this technology, which ensures the quality. The technology is already very popular in Australia, Middle east and other places.

What are the projects the company is engaged with? What kind of responses you have got so far?

At present we are working on 17-18 projects, which includes 3 NHAI project in Bihar, UP and Kerela. We are working on NH-2, from Varanasi to Aurangabad. We are just about to start two more national highway projects by the end of

this month – one in Kerala and the other in Bihar. We are also looking at working with Rajasthan government. We also got a contract in Orissa for making a road in the mining area, which require dust suppression technology. We already got approval from CMPDI and we will start the pilot project by next month. GRT is in talks with the National Highways Authority of India (NHAI) which has approved this technology. We would want to do a turnover of somewhat Rs 1,500 crore in next three years.

Most of your projects are sub-contracts. Any specific reason for doing so?

At this point we are not looking at taking direct project and are only taking sub-contracted projects and no direct ones. Dealing with government takes lot of time and right now we are happy with this model as it is working perfectly with us. One our technology is accepted and approved by the government, we can look at taking the direct project but at present at least for the next 2-3 years, we will work as per our unique business policy and will concentrate on the sub contracts. We will focus on delivering the projects that we have undertaken. We are in talks with Larson and Tubro and many other big infra companies for getting some of the work.

Road development is a key part of most of the Smart Cities Mission? Are you looking at any of the cities for road projects?

Yes. Smart Cities are one area where we are looking at go for direct bidding. We have technology for building all kind of roads and are interested in both greenfield and repair work.

We have already done one project for Mumbai Municipal body which includes a repair work at Bandra, the Lilavati Hospital road. With our machines, we can do the repair work in 20 minutes, which requires 3-4 hours.

Another advantage is that all our machines are noiseless, so it is a silent work, without any hassling sound or, dust particles troubling the citizens. We have already written to many state government and have contacted many smart cities. We expect it to materialize it by the next month.

This article was published in BW Business world issue March,2017 with cover story titled 'Cities on the Move'

EARTHQUAKE ENGINEERING

Earthquake - The reason for the disruption and destruction of various civilization and races!

Seismic events throughout the world in the recent past have triggered many professionals to look into the matter of earthquakes with more gravity than ever before. According to National Geophysical data center, over the past century, about 2 million people have died in earthquakes. Whereas about a quarter million people have lost their lives in India, which goes to show the amount of work that is required and called for in India, in the field of earthquake engineering. With **India's quest to become a developed nation and the pre-requisite** of it being sustainable infrastructure, whose biggest foe being earthquake it becomes essential for us to grow out of it. The challenge for engineers now is to develop a mechanism to effectively reduce and mitigate these losses while making a leap towards better infrastructure.

The focus of earthquake engineering begins with the study of occurrence of the earthquake and ground activity associated with it. Earthquakes are caused by movement between tectonic plates. There are mainly two types of earthquakes, inter-plate earthquakes where the movement occurs along the boundaries of tectonic plates and intra-plate earthquakes where the movement occurs within the tectonic plates. The rocks present in the **earth's** crust

possess a large amount of elastic strain energy which suddenly releases as the movement takes place. The amount of energy released during the Bhuj 2001 earthquake was about 400 times the energy released by the Atomic bomb that was dropped on Hiroshima in 1945.

Any earthquake is measured on a seismic scale which is bifurcated into two types, intensity scales and magnitude scales which measures the severity of shaking and the energy released at the rupture respectively. With this, the enormity of the earthquake is expressed and recorded. There are various types of intensity and magnitude scales, the most used magnitude scale in the current terms being Moment Magnitude Scale (MMS). The increase in the magnitude of earthquake by a value of 1 means the waveform increases by a value of 10 and the energy released from it increases by 31 times. By the help of seismographs, the vibration of the earth is recorded which helps in obtaining the ground motion and the particular direction of the origin of the earthquake and thus eventually its epicenter.

Based on the seismic activity of a region the government of India in IS 1893-1(1962), had classified the country into four different seismic zones from zone two to zone five with five being the most active zone. The regions which face

the highest amount of seismic activity and are geologically highly unstable are, Himalayan-Nagalushai region, Indo-Gangetic Plain, Kutch and Kathiawar and based on these zones recommendations for earthquake resistant design of structures were also provided in the code. But after the devastating earthquake in Bhuj-2001 the entire scenario for earthquake resistant design according to Indian standard code changed. During the 2001 Bhuj, earthquake more than 70 multistorey buildings, collapsed in the urban area of Ahmedabad, although the epicenter of the earthquake was located about 250Km away from the city. This exhibited for an immediate revision of the code, which was brought about in the year 2002.

There are numerous design considerations which should be kept in mind while designing a structure to increase its earthquake resistance. Now a days there are also methods to reduce the effect of an earthquake on a building like base isolation method and use of seismic dampers. In the method of base isolation, base isolators are used which offer resistance to the lateral movement caused by the earthquake. While Seismic Dampers are used in place of diagonal braces to withstand adequate lateral movement.

The branch of earthquake engineering which specifically looks into minimizing the destruction and losses caused by an earthquake is that of

seismic risk management. Seismic Risk of an area is computed by incorporating the vulnerability, hazard and inventory of that particular area. Seismic risk in plain terms gives the level of danger for the area under study which is calculated by considering various factors like population density, Land use Land cover, Building typology, Building age, Building height, Building strength and seismic hazard of the area.

The common misconception about earthquake has been prevalent since centuries that earthquakes kill people, but an earthquake is just a natural phenomenon causing ground shaking which in turn due to the incapability of the building to resist it causes the damage and collapse of the building which eventually leads to life and economic loss. Hence, it is not the natural phenomenon of an earthquake that is responsible for these causalities but the poor designing and execution in the construction of these buildings which makes them receptive to this unavoidable natural phenomenon.

ADD TO YOUR VOCABULARY

- **Semi-Detached Housing**
A dwelling that shares one side wall with another dwelling.
- **Septic System**
An on site waste water treatment system. It usually has a septic tank which promotes the biological digestion of the waste, and a drain field which is designed to let the left over liquid soak into the ground. Septic systems and permits are usually sized by the number of bedrooms in a houses.
- **Service Connection**
The electric wires to the building from the outside power lines.
- **Service Panel**
A separate or auxiliary breaker or fuse box separate from the main electrical service entrance. Its purpose is to tie all the electrical circuits of building into the main power line and allow each individual circuit to be protected by fuses or breakers to avoid overlading. Often referred to as the fuse box or distribution panel.
- **Setback**
Distance from the property lines, front, side, and rear, to the face of building; established by zoning ordinances.
- **Setting Time**
The time required for a specimen of cement paste, mortar or concrete, prepared and tested under standardized conditions to attain a specified degree of rigidity with particular reference to initial and final setting time.
- **Shear**
The force tending to make two contacting parts slide upon each other in opposite directions parallel to their plane of contact.
- **Shear Strees**
The shear force per unit of cross-sectional area; also referred to as diagonal tensile stress.
- **Shearing Strength**
Capacity of an object or soil to resist shearing stresses.
- **Shear-Walls**
Solid concrete walls that resist shear forces; often used in buildings constructed in earthquake zones.

Government of India
Ministry of Human Resource Development
Department of Higher Education

Shastri Bhawan, New Delhi,
the 6th November, 2007

NOTIFICATION

No.F.24 – 1 / 2007 – TS.III. On the recommendations of the High Level Committee for recognition of Educational Qualifications in its meeting held on 22nd May 2007, the Government of India has decided to give recognition to the Section A & B of Associate Membership course, equivalent to Degree and Part – I & II of Technician Engineers (T) equivalent to Diploma in Civil Engineering and Architecture Engineering Courses conducted by the Institution of Civil Engineers (India), Ludhiana (Punjab) as per syllabus approved by All India Council for Technical Education (AICTE) w.e.f. the academic session 2007 – 2008 for the purpose of employment to the posts and services under Central Government in the appropriate field. It is subject to the conditions that the total number of candidates who can be admitted for the said examination would not exceed the authorized strength of the concerned Institutions with which Institution of Civil Engineers (India), Ludhiana (Punjab) has entered into Memorandum of Understanding (MOUs). A review in respect of recognition of educational qualifications shall be made by Ministry of Human Resource Development after one year through All India Council for Technical Education (AICTE).

Alumni.....A Lifelong Relationship ! Keep it alive!

Alumni Engagement is at the core of the Institution of Civil Engineers (India). Keeping this in mind, the institution has worked towards building a strong alumni community and will continue to work in this direction.

“Alumni are the true brand ambassadors of their Alma Mater and represent it everywhere they go. They truly reflect the values of the institution from which they have graduated.

In order to actively engage our alumni, The Institution of Civil Engineers (India) encourages alumni participation to bring them together by providing a forum for meeting and exchange of views, to facilitate professional networking for mutual benefit and to contribute to the Institution’s efforts for achieving excellence in academics and research through sharing knowledge and expertise of its members in areas pertaining to academics, infrastructure, industry interactions and others, if any.

The Alumni are also invited for seminars, conferences, advancement programs etc. to enhance their learning’s which they can further use in their own respective work areas.

Keep reading this column for more news and updates on our Alumni.....!!.

The Members, who have not yet enrolled, may get in touch with us on icei.alumni01@gmail.com or at Delhi Office.
